COMPLIANCE FILING OF SOUTHERN CALIFORNIA EDISON COMPANY (U 338-E) ON BEHALF OF ITSELF, SOUTHERN CALIFORNIA GAS COMPANY (U 904-G), SAN DIEGO GAS & ELECTRIC COMPANY (U 902-M), AND PACIFIC GAS AND ELECTRIC COMPANY (U 39-M), REGARDING THE ANNUAL ESTIMATES OF CARE ELIGIBLE CUSTOMERS AND RELATED INFORMATION

In Decision (D.)06-12-038, the California Public Utilities Commission (“Commission”) granted the Joint Utilities’ request to file the annual CARE eligibility estimates on October 15 of each year. The Joint Utilities received three extensions this year to accommodate issues including but not limited to availability of critical data, additional complexity due to factors related to partial transition to Census 2010 data geography among the various data sources, vendor and Census Bureau adjustments to...
changing geographies – i.e., changes in block, tract, city, and zip code tabulation area definitions from 2000 to 2010 Census blocks. Although the October 15 submittal date has proven to be unworkable due to the unavailability of critical data, a December 31 date is feasible with the exception of unique issues that may arise during post-Census transition years. The Joint Utilities recommend the filing date for this submission be moved to December 31 of each year.

In 2009, Athens Research, the contractor that develops large and small area estimates of demographic eligibility on behalf of the Joint Utilities, carefully reviewed the sources for current year small area marginal distributions on income and household size, and found that (due in part to timing issues in their release) these small area sources did not adequately reflect the unusually pronounced 2008-2009 labor force changes revealed in other (larger area) sources like the Census’ Current Population Survey and California Employment Development Department data. In 2009, the labor market changes which began in mid-2008 were so substantial that the responsiveness of current year income estimates by demographic vendors, a key input to the eligibility estimation process, became an issue.

Athens Research reviewed current data sources in an effort to ensure that labor force changes are properly reflected in program eligibility estimates. Athens Research then developed an approach to adjust demographic vendor income estimates making use of current year evidence of inter-annual labor force changes to overcome lags in the small and large area household income distribution data available from either vendor or Census data sources. Absent these adjustments made by Athens Research, the available data would have produced a slight decrease in CARE eligibility for 2009. Instead, use of the labor force adjustments produced a substantial increase in eligibility, reflecting the California unemployment increase of 4.5% between June 2008, and June 2009. The additional adjustment to household income, as affected by labor market impacts from previous to current year, is a useful enhancement, in conditions of labor market changes, negative or positive. The Joint Utilities also recognize that the analysis supports the notion that not all job separations create newly CARE- or FERA-eligible households. For example, some households may have remaining income above the CARE guidelines even though a member of that household now is unemployed. Other households may have been CARE eligible prior to a member of that household becoming unemployed. Since the Athens
Research approach accounts for year-to-year shifts in the estimated “discouraged worker” population (as well as unemployment and slack work), by demographic, industrial, and occupational sectors in California, results are not entirely “determined” by statewide changes in the unemployment rate.

Over this same 2009-2011 period, Athens Research investigated, and provided as a possible alternative, a second potential adjustment that would incorporate newly available Census-based data from the American Community Survey – Public Use Microdata Sample (“ACS-PUMS”). These data formerly were collected every 10-years as a 5% long-form sample within the decennial Census. Since the middle of this past decade, ACS-PUMS has been collected annually. This empirically based Census product has been explored as a potential substitute for or adjunct to vendor data that has been provided by Applied Geographic Solutions (“AGS”).

This year, Athens Research observed an adjustment to the AGS data that would indicate a significant drop in customer eligibility for CARE. Athens Research could not determine the cause for this drop (a nearly three percent drop in the percentage of California households below $40,000, with clear consequences for eligibility estimates combining income and household size) and recommended the Joint Utilities accept the alternative methodology this year to incorporate the Census-based ACS-PUMS approach. The Joint Utilities implemented this recommendation and it is incorporated in this year’s estimates. The ACS-PUMS approach merely adjusts each 2010 block group level household income distribution, over 23,190 California block groups, by “normalizing” to match the 2010 household income distribution from ACS-PUMS within each of the 233 PUMAs or Public Use Microdata Areas. This approach is essentially a “meld” of ACS-PUMS and the vendor data, and Athens Research in subsequent years may consider expanding the relative role of ACS-PUMS in the estimation—particularly given that vendor data releases are timed such that they do not explicitly account for ACS-PUMS for the year preceding the eligibility estimation year. The estimates being submitted today that will be used in 2012 virtually match the prior year’s estimates at the statewide level with some variability indicating increases or decreases at regional levels, as ought to be expected from an empirical sample of roughly 130,000 households per year.

In prior years, Athens Research incorporated annual consumer price index ("CPI") data adjustments from the California Department of Finance, developed by the California Department of
Industrial Relations. This year, the CPI data was not released in time to inform this year’s estimates. Athens Research accommodated this situation by developing a provisional full year estimate for the 2011 CPI, relying for guidance upon the relationship between individual monthly (February, April, June, August, and October) and overall annual CPIs for each year between 2006 and 2010. Athens Research hopes to make use of actual annual California Department of Finance CPI estimates in future submittals, on the assumption that the February 2012 release for 2011 is an anomaly.

A number of changes and improvements are included in this year’s estimates. These include:

1) Estimates in 2010 Census geographies – block groups, Census tracts, etc., despite the fact that some data sources – notably American Community Survey, the Integrated PUMS, and Current Population Survey are in 2000 Census geographies (2000 PUMAs and Metropolitan Statistical Areas or MSAs);

2) Expansion of detail in the geographies of statewide and utility-specific estimates to include Census place, Census city, and PUMA:

3) Expansion of the number of parameters estimated to include, in addition to CARE, FERA, ESA, and HHS-related percent of poverty estimates, to include 52 estimates related to additional CARE- FERA-ESA eligibility related to categorical programs.

The Joint Utilities remain committed to expanded CARE outreach during these difficult economic times and continue to support the Commission’s goal of enrolling all eligible customers who wish to participate in the CARE program.

In Attachment A, the Joint Utilities provide tables showing – by county – total households, demographic eligibility rates for 2012, eligible households for 2012, participating CARE households as of December 31, 2011, and estimated penetration rates based on the 2011 eligibility estimates and December 31, 2011 participation. The 2012 eligibility estimates will be used initially to report January 2012 activity in the Low Income Assistance Programs Monthly Report that will be filed February 21, 2012.
Respectfully submitted,

JANET COMBS
